

ORGANIC LAWN CARE PROGRAM

* Carlson Lawn's Organic fertilizers are all natural, organic nitrogen soybean based fertilizers which work with nature to promote strong, healthy, dense green turf. They are granular and therefore stable. They stay where they are put. They do not tend to leach or run off into lakes, streams, rivers, or ponds.

* There is NO contact problems for people or pets!

* There is NO manure in our fertilizers, therefore there are NO noxious odors!

* There are NO added chemicals to our organic fertilizers!

* Organic nitrogen slow feeds the plant to help it grow.

* Our organic fertilizer helps to create healthy soil.

* Organic matter is, therefore, essential to the process by which strong vigorous microbes vitalize the soil's eco-system to help produce strong vigorous turf which is, as a consequence, more resistant to disease!

* Thicker grass means less weeds and less water run-off into our streams and lakes.

4 Applications for your lawn: Spring, Early Summer, Summer, and Fall. With your help in proper maintenance like proper mowing heights and regular mowing, watering if needed and a spring and fall lawn core aeration, you will see results. Remember, if you do nothing, you will see nothing!

Try our program today. The benefits are a great healthy choice in lawn care!
